

CARIVIX AI - GIS Intelligence Module

This document describes the GIS Intelligence System within the CARIVIX AI platform. The system provides spatial intelligence and visual mapping capabilities for geographic insights, including interactive maps, heat maps, and district or state level analysis.

Features

The GIS module supports urban heat intelligence such as heat island zones and temperature trends, as well as infrastructure mapping covering roads, hospitals, schools, and utilities. It is built using ArcGIS, QGIS, and the Mapbox and Google Maps APIs.

Purpose of This Sample

This is a genuine, multi-paragraph PDF file used to test the CARIVIX AI RAG pipeline's document ingestion capability for the PDF format, since the pipeline had not previously been tested against a real PDF document.
